

SERYT

Protect
your Style

NO FEAR
TO CHANGE

It all started with a bet of re-inventing
the way of protecting people

Developing a functional and technical
fashion masterpiece

Matching lifestyle and technical
performance in one product

OUR
TEAM

Protect
your Style

People are the essence behind the most
successful products

We are a team of enthusiastic cyclists and
nature addicted

We believe in doing things differently as the
only chance to succeed in todays competitive
scenario

While developing our products we focus on
innovation, durability and sustainability

Protect
your Style

Bring innovation into products is fantastic but bring
fashion into innovation is even greater

Protect your style is the motto of the team

We turned protection into exciting accessories that
match and inspire riders expressions and personalities

Bringing life into something that has been overlooked
for years is our goal

ONGOING
DEVELOPMENT

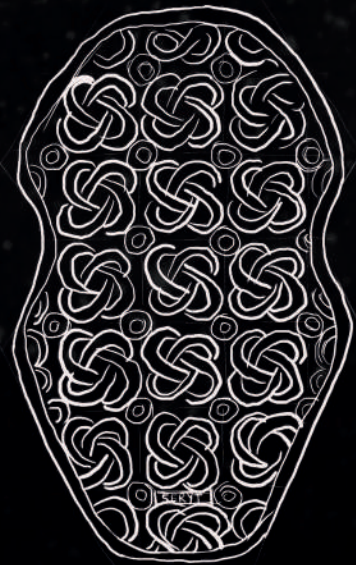

We are a young brand of fashion-protective products dedicated to providing high-quality protection for sports enthusiasts and fashion-forward individuals. As a startup, we are passionate about creating innovative and stylish products that combine performance and fashion.

Over the past few years, we have worked tirelessly to design and develop Knee pads that exceed industry standards in terms of protection, comfort, and style. We have incorporated the latest technologies and materials to provide the perfect balance between performance and fashion.

Our journey began with a desire to create products that would not only provide maximum protection but also reflect personal style and flair. We recognized the need for Knee and elbow pads that could withstand the most intense activities while still making a fashion statement.

Today, we are proud to introduce our Flow line of Knee pads to the market. Our products are designed with a unique graphic pattern that combines style and function, making them a must-have accessory for anyone who wants to look good while staying protected. We are committed to creating products that reflect the evolving needs of sports enthusiasts and fashion-conscious individuals, and we are excited to be part of your journey.

How it
started...

Ultimate Seamless Construction

Our seamless Knee pads are designed with a unique construction that eliminates bulky seams, providing a sleek and comfortable fit. The seamless design also reduces the risk of chafing or irritation, making them ideal for long hours of cycling, skiing, or motorcycling.

The material is made from high-quality, durable, and flexible Polyester and Nylon fabric that conforms to the shape of your knee, providing maximum protection and support. The Knee pads also feature strategically positioned breathable areas that wicks away moisture, keeping you cool and dry during intense activities.

Enhanced Ventilation

Our pads are designed with breathability and ventilation in mind, providing maximum comfort during intense rides. The protective pattern has been engineered to perform maximum ventilation and breathability.

The fabric is also moisture-wicking treated with Polygiene for the highest comfort during your sport activity. The design of the complete protection also allows for greater flexibility and freedom of movement. Whether you're cycling, skiing, or motorcycling, our breathable and ventilated knee pads will keep you comfortable and protected throughout your activity.

Direct Injection Process

TPU material is directly injected in the fabric to create a unique combination in terms of resistance, protection and second skin feeling.

Benefits

The product thanks to his special TPU formula provides superior protection against impacts and abrasions in any weather and temperature conditions. The protection passed the T- test of the EN1621-1 granting excellent security also at -20° conditions.

Second SKin
Feeling

Thanks to the innovative and unique production technology the low profile design of the Flow Line grant a perfect fit under long pants

Versatile

Our Knee pads are ideal for a variety of sports and activities, including cycling, skiing, and motorcycling

Multidensity Protection Area

The protection pattern is developed to have a different density and height on sides and central area

Lightweight pattern improved by strategically positioned low density circles to increase flexibility and ventilation providing the perfect balance between protection and flexibility, ensuring that you can perform at your best during intense activities while keeping your knees safe and comfortable.

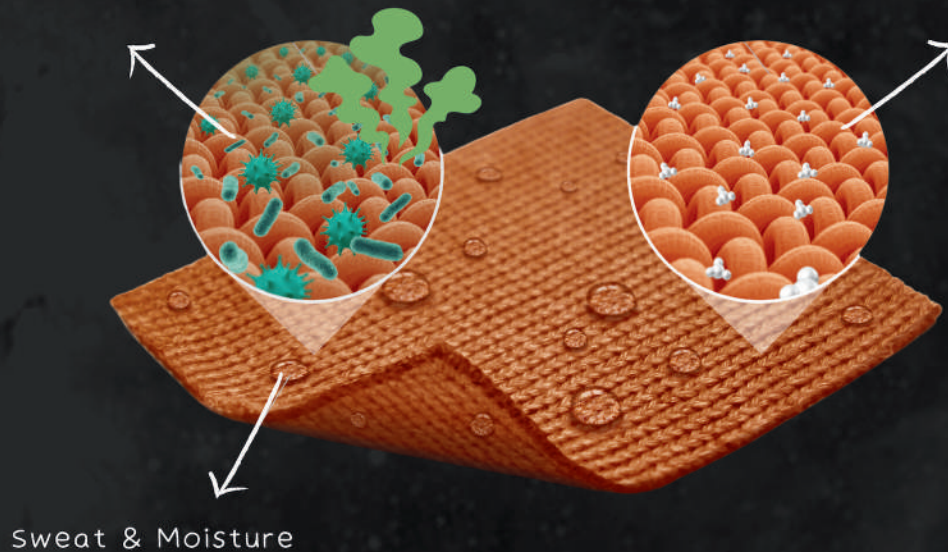

Polygiene Treatment

WITHOUT POLYGIENE STAYFRESH

Odor-causing bacteria/microbes settle and multiply in material

WITH POLYGIENE STAYFRESH

StayFresh technology stops the growth of Odor-causing bacteria

Sustainability is a prior goal
for us in every step of the
development

Polygiene stayfresh solution has been
applied to all our products to reduce
washes and cut down water usage

POLYGIENE®

Polygiene Freshness™: Functionality meets sustainability.

Polygiene is our first choice when it comes to safe and efficient odor-control technologies. We integrated Polygiene's Freshness technology Polygiene StayFresh™ into the product. Thanks to this, the Knee pad stays hygienically fresh for longer - for your confidence.

How does that work? 🧐

Polygiene StayFresh™ is a 24/7 working odor-control textile technology that inhibits the growth of odor-causing bacteria that typically cause that unpleasant 'sweat smell.' The solution is based on silver chloride, which occurs naturally in water and soil. Silver ions in the salt prevent bacteria from multiplying and thus also prevent bad odors directly at the source.

As Polygiene StayFresh™ is integrated into products at the manufacturing stage, it is only active in the material itself. This ensures it is entirely safe for use in clothing and does not interfere with natural bacteria on the skin.

The result is textiles that feel fresh and require less washing. By washing items less frequently, our customers save water and energy, reduce their environmental footprint and benefit from more durable, longer-lasting products.

Good for you and for the environment.

Product Description

- Perforated protective pattern to maximise ventilation
- Incredible lightweight: 300 g for the pair in size M
- Recycled Packaging
- EN 1621-1 T - tested and certified
- Pre-curved 3D Pattern design for premium comfort when riding
- Polygiene StayFresh technology applied to reduce washes and eliminate bed smell
- Anti-slip calf band and silicone grip lining
- Sizing S / M / L - XL
